THE ONLY POSITIVELY FIRE PROOF SAFES

IN THE WORLD ARE THE

MARLAND PATENT.

Certificates of approval, in comparison with other safes—

Gratification, Dec. 31, 1858.

Messrs. Sherman and Burgess, Agents for Marland's Patent safe. I have examined the Marland's Patent safe in your store, and so far as I am able to judge of its fire proof qualities, I believe the principle upon which it is built, the most reliable in resisting heat, of any fire proof safe that has come under my observation, and particularly recommended to the attention of the Probate Court, that are now supplying the same, for the preservation of the records of the State, by the Hon. Wm. Dean, Sec. of State, Brattleboro, Dec. 31, 1858.—This may certify that we have examined the Marland's Patent Fire Proof Safe, exhibited to us by Mr. Anson Hardy, and that in our opinion, Marland's Safe would be a desirable one to purchase for the use of the Probate Court.

H. TYLER, Judge of Probate.

Middlebury, April 27th, 1859.—The Legislature of Vermont at its last session passed a law making it the duty of County Judges to procure Fire Proof Safes, in which to deposit Probate Records. In discharge of that duty we have spent some time in examining a number of Safes we have come to the conclusion that the Marland Safe, manufactured by M. B. Bigelow & Anson Hardy of Boston, Mass., is superior to any other we have examined for its Fire Proof qualities. We have bought a safe of that description for the New Haven Probate District, and are well satisfied with its workmanship, apparent strength and durability.

THE GOOD SAMARITAN!

Ahead of all Competition!

5400 of them manufactured last year—more than double the number of any other first class stove in the United States.

THEY contain all the improvements which are in all the first class stoves, and the advantages and improvements over other stoves are in part as follows:

- 1st. An improvement overlooked in other first class stoves. It has also the same arrangement for broiling on top.
- 2d. A thorough ventilation of the Oven.
- 3d. Introducing hot air draught to the fire chamber, thereby increasing the draught of the fire chamber, and enabling it to throw out more heat—a matter much and justly complained of in other Stoves.
- 4th. An important improvement in the application of the damper, which throws the heat around the stove.
- 5th. Much greater weight, consequently heavier plates, and more durable as well as handsome castings.
- 6th. A draft damper at each end of the fire box, so that the fire is equalized, and one grate will heat as quick as the other, also better than any other.
- 7th. Fire back protected by soap-stones, so it cannot burn out.

In addition to the above improvements, it has all that is combined in other first class Stoves, viz.—Hot water Receiver, Wrought Iron, Register in front, delivery on top, doors lined with best Russia Iron, &c., &c.
